

CREATING VIDEOS WITH AI

Tools, Prompts & Precautions

THE TOOLS

Gemini Veo — Google
High-quality, realistic AI video generation

Sora — OpenAI | Runway & Pika
Cinematic quality | Creative control & flexibility

CapCut & Canva
Easy editing with AI features built right in

STEP 1: KNOW THE LIMIT

Clips are only 5–10 seconds long

Free AI video tools generate very short clips, not enough for a full video on their own.

Watermarks & limited credits

Free tiers add watermarks to your output and cap how many videos you can generate per day.

The Solution: Generate many short clips and connect them

One prompt is never enough. Create multiple clips and stitch them together into one complete video.

STEP 2: WRITE A STRONG PROMPT

Be specific, not vague : Name the subject, action, setting, and lighting ("a drone hovering over a paddy field at golden hour"), not just "a nice drone shot"

One scene, one prompt : Describe a single continuous action per prompt; cramming multiple events confuses the model

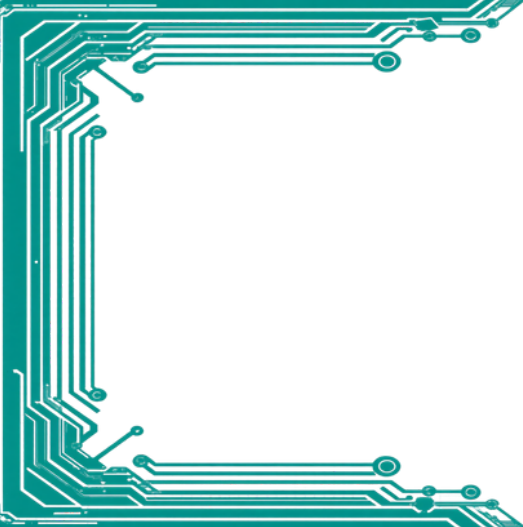

Specify style and camera : State the look (cinematic, documentary, anime) and camera movement (slow pan, aerial tracking shot) to control the visual feel

STEP 3: THE CONTINUITY TRICK

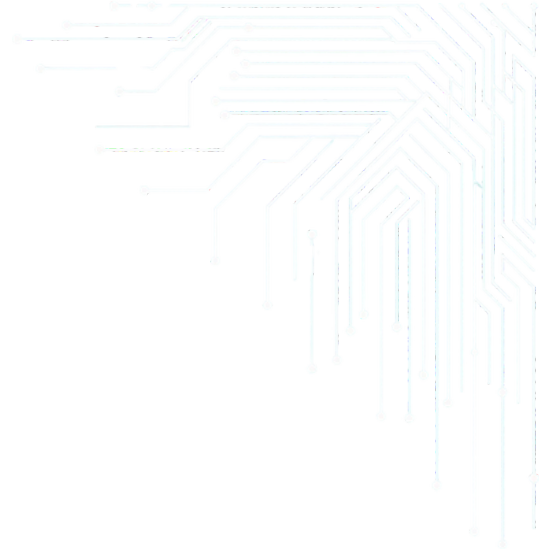

Anchor every prompt with context : Briefly describe the previous scene before describing the current one, so each clip flows cohesively from the last

Never prompt the entire video at once : The model loses context over long descriptions, and quality drops fast

Work in short segments : Generation is capped at ~15 seconds per clip anyway, so structure your story scene by scene

WHAT CAN GO WRONG

Weird hands and faces — AI often distorts human features

Broken text — words in videos appear garbled or unreadable

Glitchy motion & physics — objects move unnaturally; characters change appearance between clips

BE CAREFUL

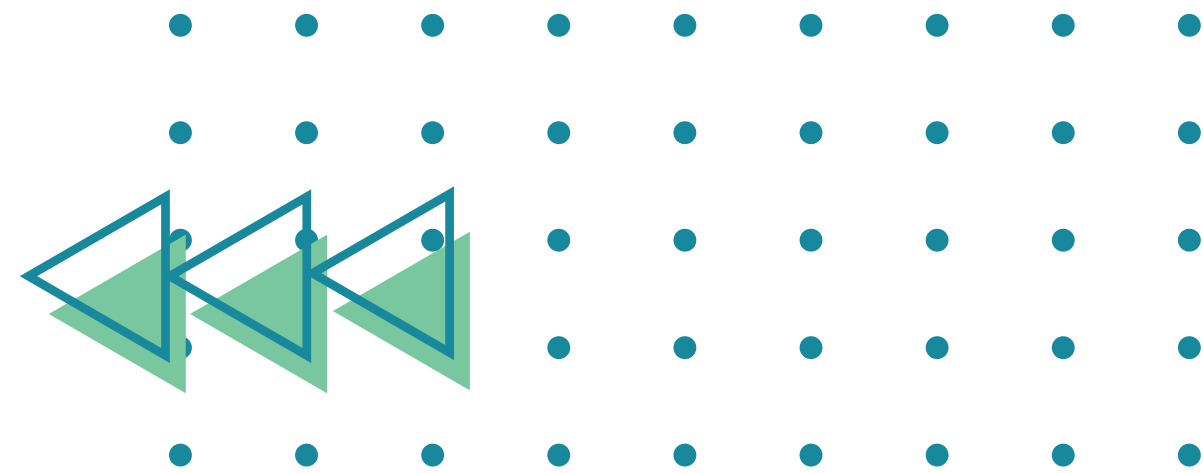

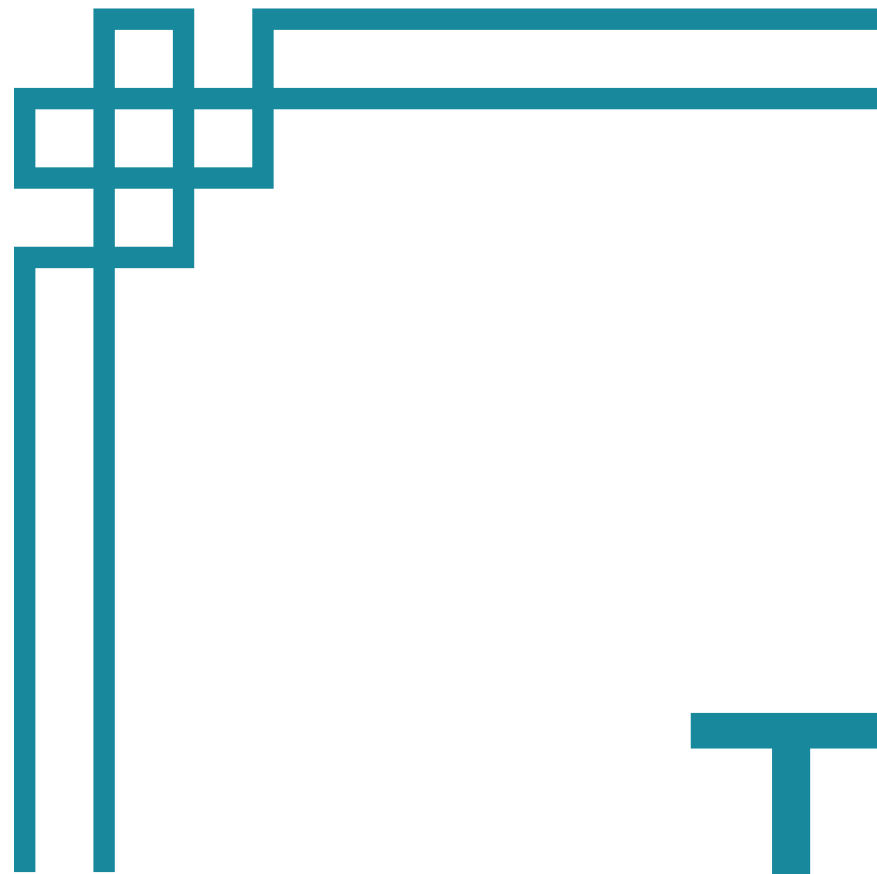

Never create videos of real people without their consent , deepfakes can be illegal and harmful.

AI output may not be fully yours, check each tool's copyright and ownership terms before publishing.

Always label AI-generated content clearly. Never use AI video to spread fake events or misinformation.

THANK YOU

Now go create something amazing with AI video!
